# The future is here!

Streamline alerting and reporting across any wired or wireless call systems

Unify all of your disparate call systems without having to invest in all new equipment!

Notify is a single, tech-agnostic overlay that connects your call systems—wired or wireless, the same or different—across all locations. One app streamlines it all, allowing for standardized alert protocols and reporting across the enterprise. No need to buy all new devices and systems—use what you have and just plug it into Notify!

Simplify

- Leverage iOS or Android devices
- Works seamlessly with a long list of compatible devices
- Leave walkie-talkies and pagers where they belong...in your past!
- Facilitate team communication – reduce response time, identify labor creep

Standardize

- Get reports for the entire enterprise – roll up, drill down, gain insight
- Standardize response and alert platform protocols
- Streamline training – the same for every location
- Empower floating team members with the same procedures regardless of location

Unify

- Tie in all call systems and devices
- Open architecture helps connect systems like real-time location, fall detection, security, environmental, and more

Expand

- Modular, agile, and flexible – a platform that will grow with you and your operation
- Future ready – Notify gets you to the starting line for what's next!

Ideal for both new and existing communities

- ✓ Equip your **new project** with future-ready technology.
- ✓ Easy **retrofit**, no wiring or large infrastructure investment.

It's Simple

- ✓ Open technology-plug anything into it
- ✓ Standardize across the enterprise
- ✓ AI ready
- ✓ IT friendly
- ✓ Superior ROI
- ✓ Secure and compliant
- ✓ Start small, scale as needed
- ✓ Easy to deploy, train, and use

Learn how easy it is to get started with future-ready communication technology!
